Tour and Travel Agency Operations System

Meeting 2 Report and Requirements Specification

Meeting Report

Team Name	Tour and Travel Agency Operations System
Date	March 11, 2026
Start Time	8:15 PM
End Time	9:58 PM
Location	Online
Moderator	Dion Hasanbashaj
Recorder	Dion Hasanbashaj
Members Present	Dion Hasanbashaj; Ana Gjergji; Alba Gjergji; Henri Aliaj; Isuf Çelhaka; Amanda Shirka
Members Absent	Gledis Ruçi

Topics Discussed

The group reviewed the evolving scope of the Tour and Travel Agency Operations System and refined the project so that it better reflects the operational needs of a realistic medium-sized travel agency. The discussion revisited the already established system foundation and then focused on the additional requirements and quality expectations agreed during this meeting.

The team reconfirmed the existing functional baseline covering customer registration, secure login, role-based access, customer profiles, package creation and publishing, package search, availability checking, booking requests, traveler records, booking review, payment tracking, booking references, booking status viewing, itinerary issuance, partner management, pricing rules, promotional campaigns, cancellations, refund recording, schedule management, guide assignment, booking notes, booking history, dashboards, user administration, permissions, report export, favorites, document checklists, trip archiving, and package customization requests.

The group also refined the non-functional expectations of the system. Particular attention was given to realistic scalability, privacy, security, availability, data consistency, usability for first-time users, clear interface language, modular semester-based development, version-controlled project artifacts, and future readiness for integration with payment services and partner systems.

After confirming the baseline, the team agreed to return back to expand the system with several other functions: receipt generation for completed transactions; payroll record maintenance; overtime calculation and recording; customer notifications after transaction events; loyalty and referral program support; automatic distribution of trip-related documents to appropriate personnel; multilingual interface support based on user preference or device language; validation of customer travel eligibility according to passport, visa, or destination-entry requirements; and filtering of package visibility according to customer eligibility.

Decisions Made

- The team confirmed that the complete functional requirements baseline from FR-01 through FR-34 remains valid and must appear in the formal project submission.
- The team approved the addition of functional requirements FR-35 through FR-44 and agreed that they should be integrated into the official requirements section.
- The team agreed that privacy, security, legal compliance, usability, availability, consistency, modularity, and future extensibility must be represented clearly in the non-functional requirements.
- The team decided that the next working meeting will focus on use cases and the preparation of the use case diagram workload for the fourth-week submission.

Functional Requirements Confirmed or Added in This Meeting

The following table records the complete functional requirements set that the team confirmed for official documentation during this meeting.

ID	Functional Requirement	Priority	Rationale
FR-01	The system shall allow customers to register an account and log in securely.	High	Core customer access
FR-02	The system shall allow staff and administrators to log in with role-based access.	High	Role separation
FR-03	The system shall maintain customer profiles including contact information and traveler details.	High	Supports repeat bookings
FR-04	The system shall allow staff to create, update, archive, and publish travel packages.	High	Package management
FR-05	The system shall store package details such as destination, duration, itinerary, capacity, price, and inclusions.	High	Primary catalog data
FR-06	The system shall allow customers to browse and search travel packages by destination, date, budget, or category.	High	Discovery
FR-07	The system shall display package availability before a booking is submitted.	High	Avoids overselling
FR-08	The system shall allow customers to submit a booking request for a selected package.	High	Core transaction
FR-09	The system shall record the number and identity of travelers linked to a booking.	High	Traveler management

FR-10	The system shall allow staff to review, approve, reject, or place bookings on hold.	High	Operational workflow
FR-11	The system shall automatically update remaining package capacity after booking confirmation.	High	Inventory consistency
FR-12	The system shall allow the recording of payment status as unpaid, partial, paid, refunded, or cancelled.	High	Financial tracking
FR-13	The system shall generate a booking reference for each successful booking.	High	Traceability
FR-14	The system shall allow customers to view the status of their bookings from their account.	Medium	Self-service
FR-15	The system shall allow staff to issue digital itineraries or travel summaries for confirmed bookings.	Medium	Customer communication
FR-16	The system shall notify customers when booking status changes.	Medium	Operational transparency
FR-17	The system shall maintain a list of business partners such as hotels, transport providers, and tour guides.	Medium	Partner coordination
FR-18	The system shall link packages to one or more service partners.	Medium	Package composition
FR-19	The system shall allow staff to define seasonal pricing or discounts for packages.	Medium	Pricing flexibility
FR-20	The system shall allow promo codes or promotional campaigns to be recorded and applied.	Medium	Marketing support
FR-21	The system shall allow customers to submit cancellation requests subject to policy rules.	Medium	After-sales handling
FR-22	The system shall record cancellation outcomes and any refund status.	Medium	Auditability
FR-23	The system shall allow staff to maintain travel schedules, departure dates, and return dates.	High	Schedule management
FR-24	The system shall support the assignment of guides or coordinators to specific trips.	Medium	Operations planning
FR-25	The system shall allow staff to add notes or special requests to a booking.	Medium	Service quality

FR-26	The system shall keep a history of major actions performed on bookings.	Medium	Audit trail
FR-27	The system shall provide dashboard summaries for sales, active bookings, cancellations, and package performance.	Medium	Management reporting
FR-28	The system shall allow administrators to create, edit, disable, and reactivate user accounts.	High	Administrative control
FR-29	The system shall enforce role-based permissions so users only access features relevant to their role.	High	Security and design correctness
FR-30	The system shall support basic report export for business review purposes.	Low	Useful but not essential
FR-31	The system shall allow customers to save favorite packages for later review.	Low	Usability enhancement
FR-32	The system shall allow the agency to record required travel documents or checklist items for a package.	Medium	Trip readiness
FR-33	The system shall allow staff to mark a trip as completed and archive operational data for historical reporting.	Low	Lifecycle closure
FR-34	The system shall support package customization requests that can be reviewed manually by staff.	Medium	Business flexibility
FR-35	The system shall allow staff to generate receipts for completed customer transactions.	Medium	Financial documentation and customer service
FR-36	The system shall allow administrators to maintain staff payroll records.	Medium	Internal staff management
FR-37	The system shall support the calculation and recording of staff overtime.	Medium	Payroll accuracy
FR-38	The system shall notify customers after successful transactions or important transaction-related updates.	Medium	Customer communication
FR-39	The system shall support a loyalty program that records and applies customer rewards or benefits.	Low	Retention and repeat business
FR-40	The system shall support a referral program for tracking customer referrals and associated benefits.	Low	Marketing and customer acquisition

FR-41	The system shall automatically distribute required trip-related documents to the appropriate internal personnel.	Medium	Operational coordination
FR-42	The system shall support interface content in the user's preferred language or detected device language.	Medium	Accessibility and usability
FR-43	The system shall validate customer travel eligibility for selected packages based on passport, visa, or destination entry requirements.	High	Prevents invalid bookings
FR-44	The system shall restrict or filter package visibility based on the customer's documented travel eligibility.	Medium	Reduces booking errors and documentation issues

Non-Functional Requirements Discussed in the Meeting

The following non-functional requirements were reviewed and formalized during the meeting.

ID	Non-Functional Requirement	Category	Rationale
NFR-01	The system shall support up to 5,000 concurrent users under expected operating conditions.	Performance	Scalability target
NFR-02	Common actions such as browsing packages, opening booking details, and viewing account information should respond within a reasonable time under normal load.	Performance	Usable responsiveness
NFR-03	The system shall protect authentication credentials and sensitive user data using appropriate security measures.	Security	Protects sensitive data
NFR-04	The system shall be designed with customer data privacy policies in mind and shall not disclose user data without authorization.	Privacy	Protects customer information
NFR-05	The system shall log important administrative and booking-related actions for traceability and control.	Auditability	Supports accountability
NFR-06	The system should remain available during standard business hours with minimal downtime.	Availability	Operational continuity
NFR-07	The system should not be offline for longer than five minutes more than three times within a single day.	Availability	Downtime threshold

NFR-08	The system shall maintain consistency between booking status, payment status, and package capacity records.	Reliability	Data consistency
NFR-09	Travel package information shall reflect dependencies on external providers such as hotels, transportation companies, and guides.	Reliability	External dependency awareness
NFR-10	The user interface shall be understandable by firsttime users after minimal instruction.	Usability	Ease of learning
NFR-11	The system shall provide confirmation messages and validation feedback for important actions.	Usability	Clear user feedback
NFR-12	The interface shall be organized consistently across customer, staff, and administrative modules.	Usability	Consistent interaction
NFR-13	The system shall use clear, professional, and consistent language throughout the interface and generated outputs.	Usability	Professional communication
NFR-14	The system shall comply with applicable legal and regulatory requirements relevant to travel operations and customer data handling.	Compliance	Legal alignment
NFR-15	The system shall be accessible to authorized users from any location with internet access.	Accessibility	Remote access
NFR-16	The solution shall be modular enough to support incremental semester development.	Maintainability	Supports staged development
NFR-17	The team shall maintain version-controlled project artifacts in a shared repository.	Process	Shared project control
NFR-18	The system design shall account for possible future integration with payment services and partner systems.	Extensibility	Future readiness

Tasks Assigned

- Dion Hasanbashaj will finalize the meeting report, consolidate the complete FR-01 to FR-44 requirements set, convert the non-functional requirements into a structured table, and prepare the updated specification for submission.
- All team members will review the updated requirements document and confirm that the listed requirements and business rules reflect the team's decisions.
- At the next meeting, the team will begin separating and assigning the use case diagram work needed for the fourth-week presentation.

Next Meeting

Date	Friday, March 13, 2026
Time	10:40
Place	Epoka Café
Main Focus	Use case analysis and division of work for the fourth-week presentation

The next meeting will concentrate on use cases, the goal of the meeting is therefore to identify the major use cases of the system, separate them logically, and assign the diagram work across the team.

Agenda and Steering Points

- Review the purpose of the use case work and confirm the scope expected for the fourth-week presentation.
- Review the list of main actors that interact with the system, including customers, staff, and administrators.
- List the major system goals each actor needs to accomplish and determine which of those goals should become formal use cases.
- Decide whether the use cases should be represented in a single overall diagram or separated into multiple diagrams by subsystem or actor group.
- Agree on a consistent naming style for use cases so the diagrams remain clear and professional.
- Divide the use case diagram work among team members and clarify responsibilities for drafting, reviewing, and final consolidation.

Questions to Guide the Discussion

- Which actors interact directly with the system, and which external entities should remain outside the system boundary?
- Which use cases are essential for the first presentation draft, and which ones can be treated as supporting or secondary?
- Where should the system boundary be drawn so the diagrams remain accurate without becoming too crowded?
- Should customer, staff, and administrator behavior be shown in one diagram or separated into clearer smaller diagrams?
- How should the use case work be divided so that each team member contributes to a coherent final set rather than producing disconnected diagrams?
